

Managing your

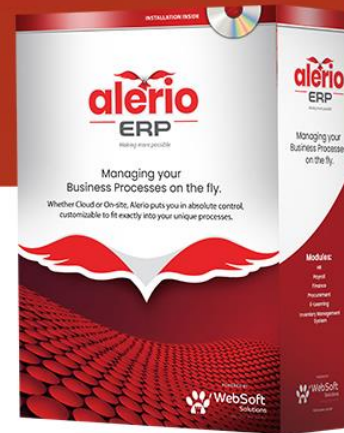

Business Processes

On the fly.

“ **AlerioERP is
Fantastic** ”

Vivian Sakyiama,
Head of HR, **Silverbird Cinemas**

Welcome to **AlerioERP**

AlerioERP is a business management software designed to integrate your business processes in such a seamless and effective manner that eradicates the bottlenecks of having to move paperwork files from one department to the other for processing. With Alerio, you are able to link your HR to Payroll and Finance, and your finance department is also able to link-up directly with procurement which is responsible for inventory requisition and interfacing with suppliers.

Our focus is to automate your entire business process in a paperless manner such that at a click of a button, your entire business is in your palms with high level summaries displayed on your dashboard, giving you insight into your business. If your business has warehouses or stores that hold inventory, Alerio is able to integrate seamlessly your stock inventory, stock movements from stores to wherever, and link it up with sales, procurement and finance. Alerio is customizable to fit your needs.

AlerioERP allows for customized reports to be made for you and downloadable in various formats of your choice.

Everything just simply works.

ESS

Alerio gives your employees a self-service portal where they can apply for leave, manage their tasks, project schedules, view payslips, check their earnings and deductions etc.

MOBILE FRIENDLY

Alerio is Mobile Friendly and can function on any mobile device.

AUDIT TRAIL

Alerio has Audit Trail feature that is able to keep track of all activities in the System, such access is restricted only to high level super user for audit purposes.

ONLINE & OFFLINE CAPABILITIES

Our ERP is cloud based but also allows for OnPrem deployment that allows for offline usage. It also allows for Hybrid system of both offline and online at the same time.

All our products are
Licensed and Certified by

Making more possible

Managing your
Business Processes on the fly.

Whether Cloud or On-site, Alerio puts you in absolute control,
customizable to fit exactly into your unique processes.

Modules:
HR
Payroll
Finance
Procurement
e-Learning
Inventory Management System

POWERED BY **WebSoft**
Solutions

Our HR module is able to integrate with time and attendance devices which is used for clocking in by employees, such that the device clocking data is imported into Alerio, and then Alerio processes it by putting the values in the relevant sections, for example, you can then check on employees personal data and you can view their work attendance history all in the Alerio.

Our Solution is Cloud-Based, we offer the option of installing on-premise if you prefer that deployment option, even though we highly recommend Cloud due to its easy management and remote technical support.

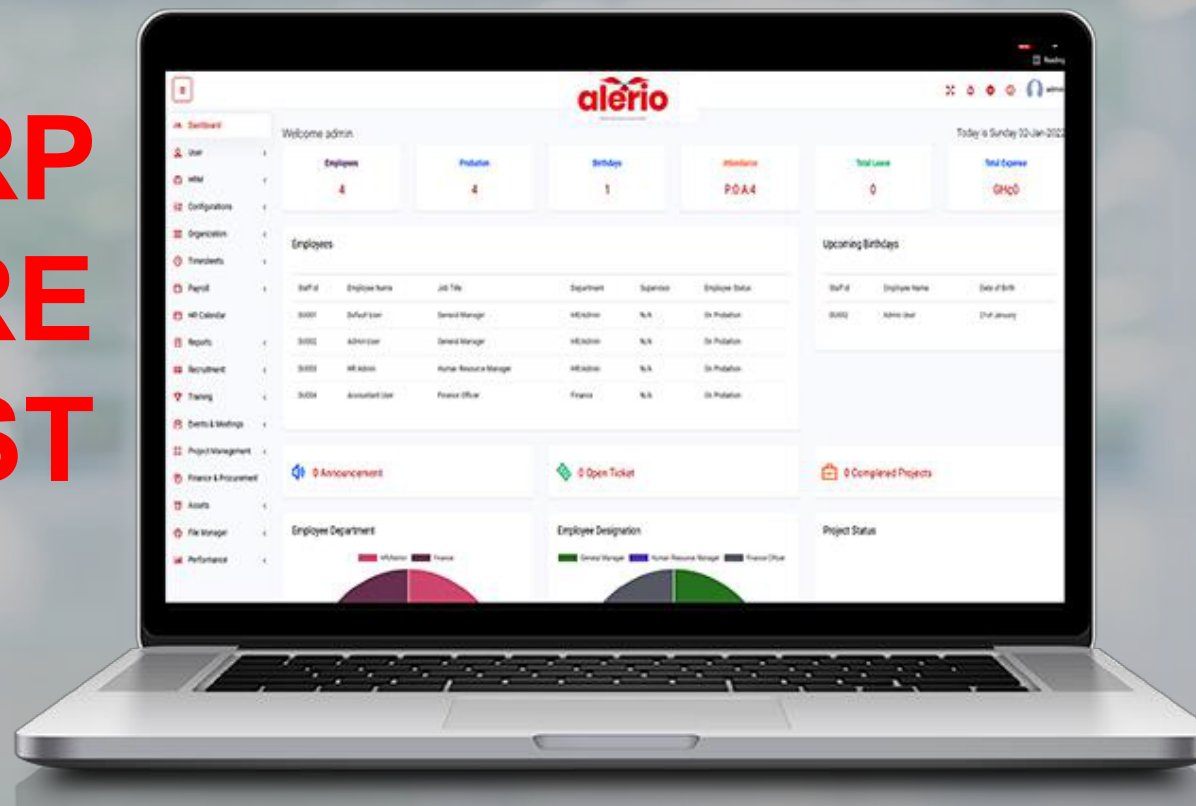

Our Solution is hosted in a secure Cloud Server called Amazon Web Server, one of the best and most highly patronized servers in the World.

We offer be-spoke customization of the software to fit perfectly into your exact process in the case where tweaking is necessary for the software to be able to handle your needs accurately.

ERP FEATURE LIST

Technical Security of AlerioERP

Our aggregation has world-class security standards and all files are hosted in a closed-group, highly protected environment with the latest firewalls. Our aggregation systems are ISO-Certified and PCIDSS Compliant.

Our AI-Powered standard Fraud Detection system monitors all transactions to ensure that there are no loopholes, all web portals are operating with Secured Socket Layer (SSL), to prevent client-side attacks and brute –force.

We do not want to burdern you with the logicstics, capital and operational expenditure of having to acquire your own techncial infrastructure, engineers, servers, support team etc simply to be able to run this Solution. This is why Websoft run this as a cloud service but also open to OnPrem Deployment. We have excellent user role and system administration module, and latest modern data encryption technology for security.

Our system is scalable, easy to integrate with 3rd party systems such as quickbooks, sage etc. Our system is open to API integrations, we also have special powerful import tools that is used to migrate data from legacy systems to AlerioERP
