About instocPRO

InstocPRO is an indigenous inventory Software-as-a-Service (SaaS) solution that assist businesses to effectively track, manage, and generate real-time analytical reports on stock control, manage expiry of products and a general performance overview to aid sales forecasting, decision making about stock as well as manage profiles on their customers.

The system is designed such as to provide the traditional functionalities of a POS application and equally be suited for managing your stock movement from one point to the other, the supply chain flow from Supplier to warehouse to store-fronts and all other internal movements with ease of integrating data into other applications whilst taking into account the instability of internet service provision as is peculiar to Africa.

Main Features contd.

in no specific order
